We're Making MR Imaging Better For You And Your Patients

At Medford Open Imaging, our Hitachi Altaire high-field performance Open MR system offers your patients the comfort of an award-winning open gantry design. Its asymmetric two-post architecture provides easy access from all four sides and offers the patient a comfortable non-claustrophobic environment. The open design easily accommodates not only claustrophobic patients but also those who are anxious or larger than average. The spacious gantry opening allows our technologists access to the patient from all sides. The comfortably padded patient table is extra wide, ultra thin, and power-driven in three directions for easy access and positioning.

The Altaire combines this patient friendly open design with a 0.7 Tesla field strength and advanced magnet technology for image quality, patient throughput and advanced clinical imaging capabilities consistent with conventional (closed) high-field systems. Hitachi also provides a wide variety of anatomically specific receiver coils rather than relying on general-purpose coils. This allows the technologist to employ a coil designed specifically for the body part being imaged, minimizing scan times and optimizing image quality.

Hitachi's CTL coil provides high image quality of the spinal region, allowing cervical, thoracic and lumbar spines to be imaged using one coil.

Medford Open Imaging is the only American College of Radiology (ACR) certified MRI facility in Medford and was the first, and is still the only, true "open" high-field performance MRI scanner in the region. Our friendly, professional staff, convenient scheduling, quality images and fast turnaround on reports makes Medford Open Imaging the best choice for both you and your patients.

If you have any questions about our facility or services, please call us at 541-857-8563. We look forward to serving you.

Think open, Medford Open Imaging, for all your
MRI scanning needs!
